The first post of your wiki's blog

This is your wiki's blog first post. Its goal is to provide a short description of your blog's main features.

- You can **create new blog posts** through the input field located on <u>your Blog's homepage</u>. A post can have one of the following statuses:
 - Once you've clicked published once, you cannot unpublish a post. However, you can choose to hide it.
 - ° Published: your post can be read by every user that has access to your blog.
 - Published & hidden: your post is published but only its creator & admins can see it. This is useful if you need to make modifications on a post that has already been published by mistake.
- Every blog article can be **tagged** and/or **categorized**:
 - You will be able to browse posts by category using the panel located on the left of the page
 - ° You can create new categories & subcategories when creating a new post
 - ° The use of tags allows your article to be found by browsing your wiki's tags, along with any other wiki document
- Blog-specific panels are available on the left of your blog page:
 - ° The recent posts lists the most recent entries to any visitor of the blog
 - ° The unpublished panel lists the blog posts you created, but didn't yet publish
 - ° The categories panel lets you browse blog posts listed by category & subcategory
 - $^{\circ}~$ The archive~panel~ lets you browse blog posts by publication date

Happy blogging!
