[The first post of your wiki's blog](#)

This is your wiki's blog first post. Its goal is to provide a short description of your blog's main features.

- You can **create new blog posts** through the input field located on [your Blog's homepage](#) . A post can have one of the following statuses:
 - *Unpublished*: your post is still a draft. It can be seen by its creator & by admins. Once you've clicked published once, you cannot unpublish a post. However, you can choose to hide it.
 - *Published*: your post can be read by every user that has access to your blog.
 - *Published & hidden*: your post is published but only its creator & admins can see it. This is useful if you need to make modifications on a post that has already been published by mistake.
- Every blog article can be **tagged** and/or **categorized**:
 - You will be able to browse posts by category using the panel located on the left of the page
 - You can create new categories & subcategories when creating a new post
 - The use of tags allows your article to be found by browsing your wiki's tags, along with any other wiki document
- **Blog-specific panels** are available on the left of your blog page:
 - The *recent posts* lists the most recent entries to any visitor of the blog
 - The *unpublished panel* lists the blog posts you created, but didn't yet publish
 - The *categories panel* lets you browse blog posts listed by category & subcategory
 - The *archive panel* lets you browse blog posts by publication date

Happy blogging!
