The first post of your wiki's blog

This is your wiki's blog first post. Its goal is to provide a short description of your blog's main features.

- You can **create new blog posts** through the input field located on your Blog's homepage . A post can have one of the following statuses:
  - *Unpublished*: your post is still a draft. It can be seen by its creator & by admins. Once you've clicked published once, you cannot unpublish a post. However, you can choose to hide it.
  - *Published*: your post can be read by every user that has access to your blog.
  - *Published & hidden*: your post is published but only its creator & admins can see it. This is useful if you need to make modifications on a post that has already been published by mistake.
- Every blog article can be **tagged** and/or **categorized**:
  - You will be able to browse posts by category using the panel located on the left of the page
  - You can create new categories & subcategories when creating a new post
  - The use of tags allows your article to be found by browsing your wiki's tags, along with any other wiki document
- **Blog-specific panels** are available on the left of your blog page:
  - The *recent posts* lists the most recent entries to any visitor of the blog
  - The *unpublished panel* lists the blog posts you created, but didn't yet publish
  - The *categories panel* lets you browse blog posts listed by category & subcategory
  - The *archive panel* lets you browse blog posts by publication date

Happy blogging!
