Information

Help on Rights Editor usage.

Rights editor help

Users

This field should contain the wikiname of each user you want to apply the rights to. For example *XWiki.JohnDoe*. *XWiki.XWikiGuest* should be used for unidentified users.

Groups

This field should contain the wikiname of each group you want to apply the rights to. *XWiki.XWikiAllGroup* represents the group of all logged-in users with an account on your Wiki.

Access levels

This field should contain a list of access levels that you want to apply to the users and groups specified. Available access levels are: admin, programming, register, edit, view, comment. To protect your wiki in view and edit mode use "view, edit". To protect adding comments use "comment".

Allow/Deny

This field should contain *Allow* to specify that this is an allow right, and *Deny* to specify a deny right. An *allow* right means: "this wiki, space or document is **only** visible or editable to the users or groups specified.
